                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Submitted (03 NOV-1999) The Institute for Genomic Research, 971: Medical Center Dr. Rockville, MD 20850, USA, xlinetign.org ON Nov 10, 1999 this sequence version replaced gis622531.

* NOTE: This is a "working draft' sequence. It currently consists of 1 contigs. Gaps between the contigs.

* are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved

* the accession number will be preserved

* the accession number will be preserved

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Albumitted (09-JAN-1998) Chromosome 6 Project Group (http://www.anger.ac.uk/HGP/Chr6/) Sanger Centre, Hinxton, Cambridgeshire, CBIO 18A, UK. E-mail enquires: humquery@sanger.ac.uk/HGP/Chr6/) Sanger Centre, Hinxton, Cambridgeshire, CBIO 18A, UK. E-mail enquires: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk on Jan 13, 1998 this sequence version replaced $1:259467.

IMPORTANT: This sequence is the entire insert of clone 514K20. During sequence assembly data are compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variations annotated may not be found in the sequence submission corresponding to the overlapping clone as we submit sequences with only a small overlap as described above.

This sequence was generated from part of bacterial clone contigs of mapping group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6/

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the feature be.

On Aug 24, 1999 this sequence version replaced gi:5679778.
On hug 24, 1999 this sequence version replaced gi:5679778.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em: EMBL; Sw.; SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at their source databases:
the entire insert of clone 101K10. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e-g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key.
This sequence elements (e-g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure' feature Chromosome 6 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chf 101K10 is from the library RPCI-1 constructed at the Roswell Park cancer Institute by the group of Pieter de Jong. Note that the Sequence is unfinished and does not necessarily represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage etc. Order of sequence from E.coli, yeast, vector, phage etc. Order of sequence from E.coli, yeast, vector, phage etc. Order of sequence from E.coli, yeast, vector, phage etc. Order of sequence from E.coli, yeast, vector, phage etc. Order of sequence from E.coli, yeast, vector, phage etc. Order of sequence from E.coli, graft, sequence from E.coli, graft, sequence from E.coli, graft, vector, phage etc. Order of sequence from E.coli, yeast, vector, phage etc. Order of sequence from E.coli, yeast, vector, contig_ID 00000 Length: 12284bp

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           * NOTE: This record contains 154 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

(1996-1997)

**This is a 'working draft' sequence. It currently consists of 23 confligs. Thus of Action order of the pieces is not known and their corder in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. * This record will be updated with the finished sequence as soon as it is available and the accession number will * be preserved.

CITB-HS-A. The library contains cloned DNA from human sperm. See: Shizuya et al., Proc. Natl. Acad. Sci. USA 89:8794-7 (1992); U-J. Kim et al., Genomics 34:213-8 (1996). The clone is available from Research Genetics, Inc. (http://www.resgen.com).
                                                                                                     NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RG241102, 200 bp overlap.
Actual start of this clone is at base position 88412 of RG241102;
actual end is at 155164 of RG242H14.

L Submitted (06-MAR-1999) Genome Sequencing Center, Washington University School of Medicine, 4444 Forest Park Parkway, St. Louis, MO 63108, USA
ON Apr 16, 1999 this sequence version replaced gi:4371318.

* NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as it in so of N, but the exact sizes of the gaps are unknown.

* This record will be exact sizes of the finished sequence as soon as it is available and the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AC007027 166925 bp DNA HTG 16-APR-1999

NOTE: This is a 'working draft' sequence. It currently consists of 16 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

no Oct II, 1999 this sequence is unfinished and does not necessarily

represent the correct sequence in unfinished and does not necessarily

represent the correct sequence in work on the sequence is in progress

and the release of this data is based on the understanding that the

sequence may change as work continues. The sequence may be

contaminated with foreign sequence from E.coli, yeast, vector,

phage ecc. octor of sequence 130109015 Contig_ID: 00002

TION P.falciparum gene for STARP antigen.

226314.1 GI:499324

35 TARP antigen.

Plasmodium falciparum

Plasmodium falciparum

Plasmodium falciparum

Pokaryota, Alvolata; Apicomplexa; Haemosporida; Plasmodium.

CE 1 (bases 1 to 2787)
